

Intelligent Ribbon Heater and Jacket Form

Introducing our latest product, the ribbon heater with a 20mm insulation layer infused with glass felt. Compared to conventional ribbon heaters, our innovative product offers superior energy-saving performance due to the inclusion of the insulation layer.

By combining Glass Ribbon (which is basically made of same material as our ribbon heater, but without the heater inside, see illustration 2) and jacket form, our ribbon heater can insulate up to 40°C on the surface even at a pipe temperature of 200°C, enabling highly efficient heating operation.

1
Installing the ribbon heater, without Glass ribbon and outer cloth

2
After installing the Ribbon heater, it is recommended to also install our Glass Ribbon too

3
Finally our Jacket form made of melamine sponge will optimize the use of ribbon heater

4
Jacket Form made of melamine sponge

Specifications: Heater, Glass Ribbon and Jacket form

Heater Specifications

- Width 25mm, height 20mm, length 2m
- 200V, 280W, maximum operating temperature 250°C

Glass Ribbon:

- Width 25mm, height 20mm, length 2m

Jacket form:

- Melamine sponge insulation 15mm
- Standard product: Straight pipe 1m, also available in other type such as elbows, etc.
