

# Solution for pipes that are difficult for maintenance due to heights and narrow spaces

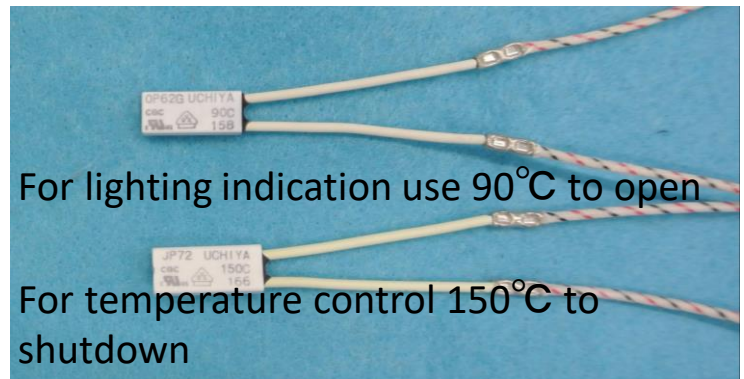

- Fabric heater ideal for partial heating up to 150°C
- Suitable for service power supply (100V).
- Temperature control not required (self-control with built-in thermostat)."

# Our fabric heater is developed to make it more affordable and easier to use for our clients

- The insulation material is a separate jacket form from the heater. It can be cut and installed on-site.
- The thermostat has a lifespan of 100,000 cycles/15A, with 1 year warranty. But it has a track record of operating for over 3 years
- The heater has a safe structure and is highly stable. If the thermostat cuts off, the lamp will switch off. In case of extreme situation, the depending on the fuse it will shuts down the system.

on-site adjustment possible
